WORKS WELL

The variables are being attached to the right things.

Chrome is opening and getting the max price.

• **What has not been working?**

My other Walmart and BestBuy scraper…

• **What can you do differently to address what hasn't been working?**
   o I been trying to understand… was wondering if it is because the right to scrape from Walmart but I am not sure.

   o BestBuy I couldn't find the max price variable

   o Try didn't method of scraping using bs4 and BeautifulSoup in python.

Walmart

Kyo Lee: trying out scraping code on Walmart website on TV items.

Error I got with selenium module:

C:\Users\dndry\Desktop\INST326>C:/Users/dndry/AppData/Local/Programs/Python/Python39/python.exe c:/Users/dndry/Desktop/INST326/project/project_check1.py

Traceback (most recent call last):

  File "c:\Users\dndry\Desktop\INST326\project\project_check1.py", line 7, in <module>

from selenium import webdriver

ModuleNotFoundError: No module named 'selenium'

Decided to test on notepad++

Got the chrome opened with this message:

DevTools listening on ws://127.0.0.1:61982/devtools/browser/4269c3c5-e6fb-4a7c-9eb0-b3ac45be7610

- **What has been working?**

Chrome successfully opens

- **What has not been working?**

Doesn't print any TV results… gets error message

- **What can you do differently to address what hasn't been working?**

I been trying to understand… was wondering if it's because the right to scrape from Walmart but I am not sure.
